

Biomass Natural Dyeing Care Guide

Wash separately in cool water at 30°C or below, using a pH-neutral detergent such as Wool Shampoo.

Washing with detergents containing oxygen bleach, such as sodium percarbonate or sodium perborate, or chlorine bleach may change the colour of the garment.

Air-dry or store in the shade, away from direct sunlight.

We recommend placing a cloth over the garment when ironing.

Do not wring.

Dry cleaning with petroleum-based solvents is permitted.

As the product is dyed using natural materials such as plant roots and fruits, it may have the characteristic scent of plants and roots.
